duraplus®

HOPPE divides its product range into three lines based on the customers' different requirements in price and perception of value – duravert®, duraplus® and duranorm®. duraplus® stands for better product line.

Secustik®

Secustik® technology Window handles with Secustik® technology hinder unauthorised tampering with the window fitting from outside by an integrated jamming mechanism. The precision clicking of the blocking mechanism when engaging itself is the audible sign of more security for your windows.

Secu100®

Secu100® technology The Secu100® technology prevents the turning and pulling off of the window handle up to a torque of 100 Nm*. * 1 Nm (Newton metre) is equal to the torque resulting from a force of one Newton applied perpendicularly to a lever arm which is 1 metre long.

Secu100®

Secustik®

Secu100® + Secustik® technology The Secu100® + Secustik® combines the Secu100® with Secustik® technology. With this, not only is there a high degree of safety when locked, but also an in-built permanent, basic security even when unlocked.

SecuTBT®

SecuTBT operation SecuTBT window handles are suitable for TBT(Tilt Before Turn) window hardware only, TBT meaning the sequence of opening and closing the window: closed - tilted - turned open.

Resista®

Resista® For hardware with Resista® HOPPE offers a 10-year surface guarantee (see also "Guarantee"). Resista® hardware is ideal for coastal areas and highly frequented areas such as public buildings, shops and hotels.

VarioFit®

VarioFit® Instead of many variants with different spindle lengths: With VarioFit®, the solid spindle of the window handle flexibly adapts to the depth of the window profile and thus the position of the gear.

BRAND ATTRIBUTES
